

Use of Biovin in agriculture

Research Assignment: Bundesministerium für Wissenschaft und Forschung Nr. 30.119/2-23/83
Wien, Boltzmann Institut.

Course of the **humus content** (in % dry soil) in lots with tree planting, potatoes, winter wheat and barley; with 3 variants of fertilizing.

This picture shows how of Chemical fertilizer (blue) the Humic Acid in the soils totally degraded, while BIOVIN (green) promotes this extreme.

Dieses Diagramm zeigt, wie Chemischer Dünger (blau) die Huminsäure der Böden total degradiert, während BIOVIN (grün) diese extrem fördert.
